New Performance Level for OT1300 Panel PC Series
Bachmann relies on high-performance, 11th-generation Intel processors and offers versatile, individual adaptation possibilities.

Feldkirch, Austria – August, 2023

Bachmann, a leading provider of automation solutions, takes the next step into the future: Namely, equipping the OT1300 Panel PC Series with high-performance, 11th generation Intel processors that guarantee faster data processing and maximum work performance. Moreover, the new variant diversity of CPU and memory media enables perfect adaptation to custom requirements and thus offers cost-optimization potential. For example, high performance requirements can be implemented with pin-point precision and applications that are less "performance hungry" can take advantage of lower-cost variants.

The OT1300 Series offers full scalability, not just for the processors, but also for RAM, mass storage devices, and display diagonals.
This flexibility not only offers customers the best-possible price-performance ratio, it also significantly reduces development and maintenance costs.

Special emphasis has been placed on characteristics such as long-term availability, robustness or industrial design; this means that compatible solutions have been found for future repair and spare parts, to keep the conversion effort to a minimum and reduce costs. Device design remains neutral; there is no visible logo and design remains in the customer's hands.

In the standard configuration the operating devices are delivered with the current Windows 10 Edition, Windows 10 IoT Enterprise 2021 LTSC. This edition offers the longest-term update support, to ensure maximum security. It is also possible to import customer-specific images ex works to keep the commissioning effort minimal. In addition, Bachmann offers the pre-installed atvise® HMI package that combines high-performance software with SCADA features and therefore enables easy and cost-effecive implementation of demanding applications.

And last but not least, Bachmann itself is the central contact for all concerns (HMI, software, and control system). With extensive experience and industry expertise, Bachmann is at your side for any challenges, supports developments and simplifies processes for sustained customer success.

About Bachmann – The Power to Control
Automation, Grid Measurement and Protection, Visualization and Condition Monitoring for plants and machines: this is the core competence and the future of the Bachmann world. Headquartered in Feldkirch, Austria, we are an international and rapidly expanding organization with over 500 employees worldwide. We have been developing unique automation and system solutions for our customers on a global scale for over 50 years.

We increase productivity through powerful and flexible automation solutions. Our intelligent, scalable technology is based on over 50 years of integrated engineering experience. With this know-how, we support machine developments and simplify production processes for our customers' continued suc-cess. We collaborate with our customers, building trust in the market through the development of unique, customized technologies, whilst strengthening our position as a state-of-the-art solutions pro-vider.development.
